

Bar Chart (Sample 1)

The chart shows the proportion of renewable energy in total energy supply in 4 countries from 1997 to 2010.

Sample Answer

The bar chart compares the percentage of renewable energy compared to total energy supply in four different countries: Australia, Sweden, Ice, and Turkey, in three years: 1997, 2000, and 2010.

Overall, it can be clearly observed that while the use of renewable energy of Sweden and Iceland experienced an upward trend, that of Australia underwent a downward trend. It is also interesting to note that the figure for Turkey fluctuated throughout the given period.

Starting in 1997, at 45%, the usage of renewable energy in Iceland was the highest among all nations, followed by Turkey, Australia, and Sweden at 37%, 9%, and 5%, respectively. Surprisingly, in 2000, the use of renewable energy seemed to increase in every country as the figures rose to 8% for Sweden, 60% for Iceland, and just above 40% in Turkey. However, Australia was the exception, seeing that its figure declined slightly from 9% to 8% in the same year.

From 2000 to 2010, although the percentages in Australia and Turkey fell moderately to 5% and just above 30%, respectively, those of Sweden and Iceland displayed an increase of 10% for Iceland, and only 1% for Sweden. Finally, it is noticeable that among all nations, Iceland had the highest growth, by 25%, throughout the three years.
