

PART 3

- ***vocabulary***
- ***expanding your ideas***

TOPICS :

- media and technology
- health and diet
- places
- education
- life
- family and friends
- entertainment
- money

The importance of expanding your ideas

- ***What can people do on social media?***

- people can do a couple of things. First, people can relax second people can use social media, and finally, people can use social media to talk to other people.
- Extended answer
 - People can use social media to do a couple of things. Firstly, people can relax. For example, a lot of people use social media like Facebook and Instagram to look at other people's stories, and they will feel relaxed. And finally, people use social media to talk to other people. For example, I know that my grandmother uses Line very often to talk to her old friends who live far away from her.

How to extend your answer

- Justify your response
 - The reason why I said this is because
 - My reasoning is that
 - Mainly because
 - According to the statistics,
 - According to the majority of people
 - For one thing

How to extend your answer

- Give an example by using these words
 - For example,
 - For instance,
 - Imagine,
 - There are a number of cases/ situations where

What do you think are the key factors that contribute to the success of a business?

I think that there are many factors for example hard work and patience and money and luck.

I think that there are many factors, especially hard work and luck. For example, if people work really hard, then it's almost like a guarantee that they will succeed. However, there are also cases where people are extremely lucky. For example, I believe that Tesla was successful because it was launched during a time when the price of oil was expensive.

EXTEND YOUR ANSWER EASILY BY

- GIVING REASON

- GIVING EXAMPLE

- ***Why do people always miss their childhood?***

I think that it is because it reminds me of the time when they had no responsibility. The reason why I said this is because I used to run around without any care in the world compared to now, as I have to be responsible to feed my family. For example, whenever I had problems at work, I always wished that I was 3 years old so I didn't have to deal with the drama.

- ***What skills do primary students need to master?***

- I believe that it is crucial for students to learn life-long skills instead of academic subjects, such as critical thinking. My reasoning is that in the future, it will be fundamental for people to be able to think on their own in order to thrive personally and professionally. For example, if one becomes a doctor, apart from the knowledge of medicine, they need to have a critical thinking mindset to understand the needs of their patients and to handle unexpected situations.

Is it hard for students to learn new skills?

- I honestly don't think so because when you are young, your brain is like a blank canvas and that's the perfect time for you to absorb new information. For example, there are many cases where kids become bilingual because they started speaking two languages when they were young. So I think that it is very easy for kids to learn new information, especially when compared to adults.

Why is it hard for adults to learn a new skill?

I believe that it is a challenge for adults who acquire new knowledge because they don't have time to dedicate to what they're learning, especially those who are working because they have to work long hours and they have a lot of responsibilities. For example, if you have a full-time job, then you have to sacrifice at least 12 hours of your day to your work, and that wouldn't give you any time to learn new information. But in my opinion, I think that it is not hard for adults to gain new knowledge or skills if they make time for it.

***Is a teacher important
to students' learning
experience? Why?***

I think that teachers play a crucial role in the learning of students because they are the ones who can inspire students to love or hate the subject. For example, when I was younger, I used to really hate math classes because the teacher was really bad and he was really condescending. He was not helpful at all when it came to like hard topics and that really affected me as a person. Growing up, I used to absolutely despise math because of him.
