What makes a good student?

First of all, I think that it's crucial for people to be open to new knowledge all the time/constantly and to be curious because there is so much in the world to learn and nobody's too old to learn. So, I think that it's really important for people to stay hungry for knowledge. And this is what, according to me, makes a good student.

What subjects do you think will be added to your high school?

That's a hard one. I think that in the future, subjects that are less academic, like media literacy or how to survive in the digital world, will be added to high school because I think that nowadays, things are changing really fast and it's important for students to learn to adapt to the new world, especially the digital and virtual worlds, so I think subjects like how to understand media, how to make money from social media, or even how to stay mentally healthy in the virtual world will be incorporated into the curriculum.

Can the students in your country choose their favorite subjects?

To some extent, but that depends on the type of school students attend. For example, if you attend an international school, you have total freedom to take whatever class you want. However, if you attend a regular school, such as a public school, then your choices are more limited. For example, if you are in a science program, it's impossible for you to attend your foreign language classes.

How can a teacher make lessons for children more interesting?

I think that creativity is really important when it comes to education, especially for teachers. The first thing that comes to my mind is that teachers should be able to make the subject more relevant to students. I remember being a student and learning about, how useful English is in real life, and that's how I got interested in learning English, so I think that the most important thing is for teachers to figure out how to make students realize that what they're learning is actually useful in real life situations.

What is your opinion on the way languages are taught in schools?

I think that normal schools tend to focus too much on grammar rules and memorization when, in reality, it is important to realize that languages are there for people to communicate, so personally, I think that schools should consider more about the usefulness of languages instead of the rules and grammar. For example, the first thing that they can probably do is to encourage students to speak to each other in the language they're learning during class. I think that it's already more effective than learning about rules.

What changes do you think will happen in the classroom in the near future?

I think that for tertiary education, schools will be more practical because I feel like people are realizing that a person's professional experience is actually more important than theoretical knowledge, so I think that universities will encourage students to learn more from experience. On the other hand, I think that for high school students, they will focus a lot more on academic classes because I think that the competition to enter higher education will be very intense, so students have to be very competitive in terms of their academic knowledge for university entrance exams.
