

WRITING TASK 1

You should spend about 20 minutes on this task.

The pie charts below show the units of electricity production by fuel source in Australia and France in 1980 and 2000. Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Grammar → N uncountable ≠ articles ^a ^{the}

The two pie charts compare the units of the production of electricity by different sources: coal, oil, natural gas, hydro power, and nuclear power, in Australia and France in 1980 and 2000.

Overall, it can be clearly ^{observed} seen that while coal

remained the largest source of electricity in Australia during both years, nuclear power became the biggest source of electricity in France in 2000, replacing coal and natural gas.

Starting in 1980 in Australia, at 50 units, coal ^{account for} represented the largest source of electricity, followed by natural gas and hydro power both at 20 units, and by oil at 10 units. Interestingly, coal continued to ^{as} dominate the electricity production because its figure increased ^{drastically} ^{considerably} to 130 units. in 2000. Similarly, the use of hydro power also ^{rose} significantly from 20 to 36 units across the same period. However, the figures of oil and natural gas both decreased ^{drastically} to 2 units in 2000.

With regard to France in 1980, ^{BAV} natural gas and coal ^{used to} account for the largest fuel source of electricity both at 25 units. On the other hand, they were ^{substituted} replaced by nuclear power, which ^{surged} grew considerably from 15 units in 1980 to 136 units 20 years later. and became the most significant source used to generate

electricity in 2000.

was/were the largest source of...

represent
account for (v.)

surge
skyrocket

increase
rise
grow

increase (v.)

≠

decrease (v.)

decrease
fall
decline

decrease (adv.)

dramatically
drastically
considerably
significantly

replace (v.)

replace

substitute (broadly)
