

Introduction

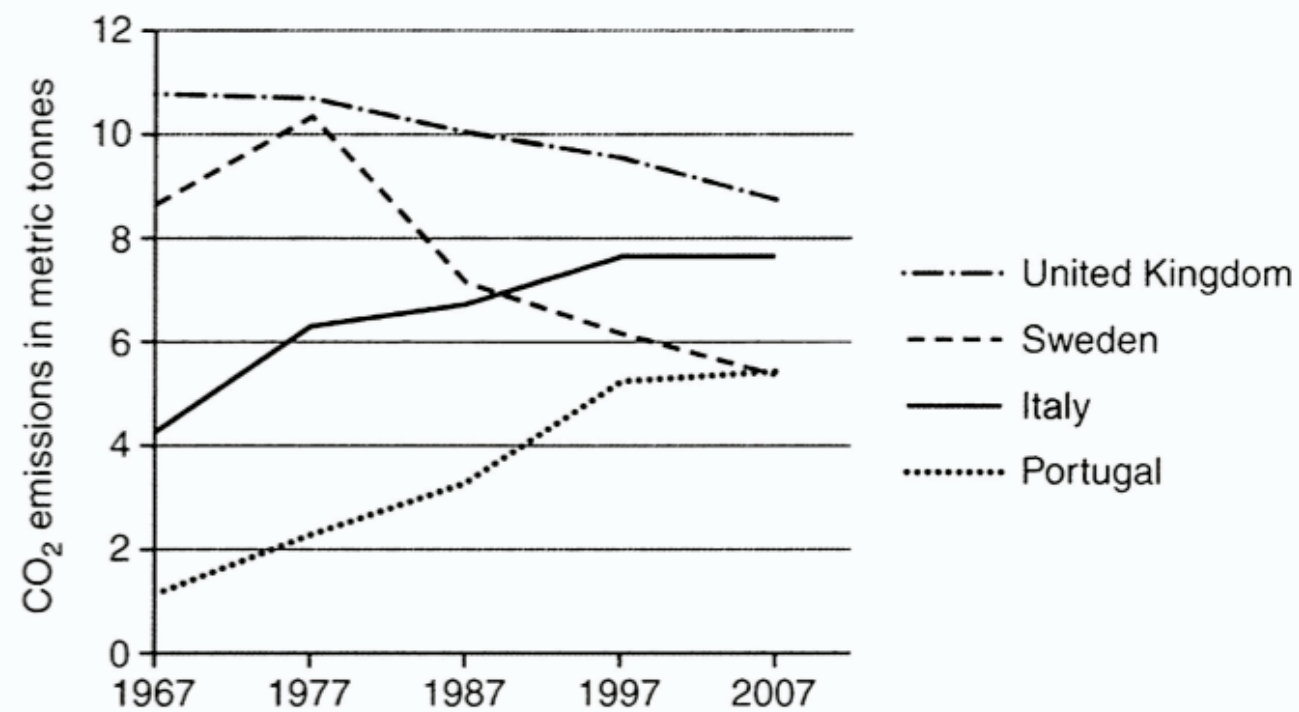

You should spend about 20 minutes on this task.

The graph below shows average carbon dioxide (CO₂) emissions per person in the United Kingdom, Sweden, Italy and Portugal between 1967 and 2007.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Average carbon dioxide (CO₂) emissions per person, 1967–2007

The _____ (ข้อมูล) _____ (เปรียบเทียบ)
_____ (เฉลี่ย) _____
_____ (การปล่อย) of carbon dioxide
_____ (ต่อ 1) person in the
_____, _____, _____
_____ and _____ over

_____ (ช่วงเวลา)
from _____ to _____
_____.

Average carbon dioxide (CO₂) emissions per person, 1967–2007

From 1977 _____ (เป็นต้นไป), _____ (หลังจาก) _____ (ขึ้นไปสุด) _____ (ที่) 11 tonnes in 1977, the _____ (syn. average) emissions in Sweden _____ (ลง) _____ (อย่างแรง) by _____ (เกือบครึ่ง) to just above 5 tonnes in 2007 _____ (ในขณะที่) _____ (ตัวเลขของ) of the UK _____ (เรื่อยๆต่อไป v.) to _____ (ลด) and _____ (จบที่) 9 tonnes _____ (ในช่วงสุดท้ายของเวลาที่ให้มา). _____ (ในทางตรงกันข้าม), the average _____ (carbon dioxide) _____ (ปล่อย) of Italians and Portuguese _____ (ขึ้นมาที่) around 4 tonnes _____ (ต่อคน) _____ (ในช่วงเวลาเดียวกัน).

The line graph compares the average release of carbon dioxide by one person in the United Kingdom, Sweden, Italy, and Portugal over a 50-year period from 1967 to 2007.

Overall, an upward trend could be observed in Italy and Portugal, while the UK and Sweden underwent a downward trend during the given time frame.

Starting in 1967, at approximately 11 tonnes per person, British people emitted most carbon dioxide among the four countries, followed by Sweden, Italy and Portugal at roughly 9, 4 and 1 tonnes, respectively. However, from 1967 to 1977, while the figure for the UK slightly dropped by 1 tonne, that of Sweden, Italy and Portugal rose steadily to 11, 7 and 2 tonnes, respectively.

From 1977 onward, after peaking at 11 tonnes in 1977, the mean emissions of one Swedish declined dramatically by almost half to just above 5 tonnes in 2007; in the meantime; those of the UK continued to fall and finished at 9 tonnes at the end of the period. In contrast, the average CO2 discharge of Italians and Portuguese grew by around 3 tonnes per capita during the same period. (183 words)
