Introduction

The line graph compares the consumption of four different types of food: fish, chicken, beef, and lamb, in ^{an} unidentified country in Europe over a 25-year period from 1979 to 2004, measured in grams per person per week.

Overview

experience

an upward trend ↗

undergo

+

a + downward trend ↘

remain

stable ➡

Overall, it can be clearly observed that while the consumption of chicken experienced an upward trend, that of beef and lamb underwent a downward trend. It is also interesting to note that fish consumption remained relatively stable throughout the given time frame.

Body 1 (2-3 sentences → complex)

Starting in 1979, at 220 grams weekly per capita, the consumption of beef was the highest among all sorts of food, followed by lamb, chicken, and fish at 150, 140, and 60 grams.

respectively. However, beef and lamb consumption declined moderately to 200 and 120 grams^{↑ in 1989} whereas the figure for chicken rose significantly to 200, overtaking beef some time before 1989.

Body 2 (2-3 complex sentences)

From 1989 onwards, the consumption of chicken continued to grow dramatically and reached its peak at 250 grams in 2004. On the other hand, the figure for beef and lamb fell consistently / progressively, and reached their lowest points at just above 100 and 50 grams across the same period. Interestingly, (1) people seemed to consume fish at a consistent rate, ^{because} seeing that its figure remained unchanged at approximately 50 grams from 1979 to 2004. (2) Interestingly, fish consumption remained unchanged throughout the given 25-year period.
