WRITING TASK 1

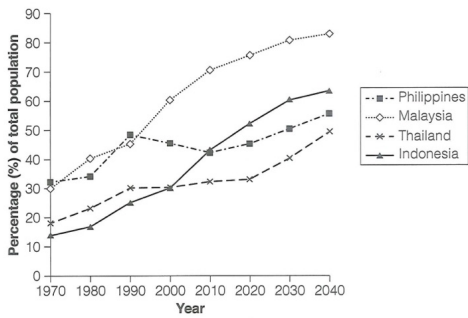

You should spend about 20 minutes on this task.

The graph below gives information about the percentage of the population in four Asian countries living in cities from 1970 to 2020, with predictions for 2030 and 2040.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

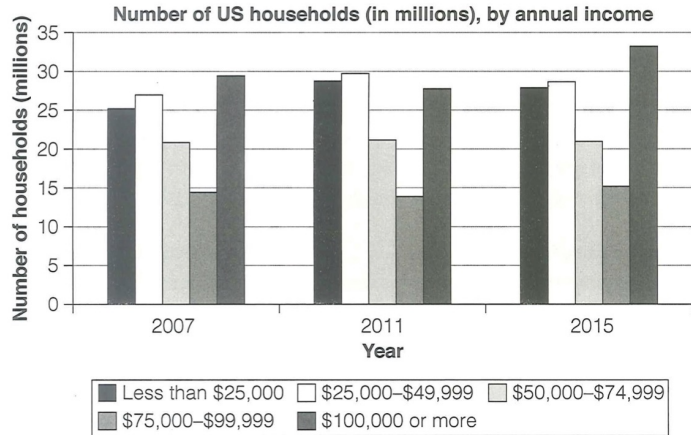

Percentage of the population living in cities

The chart below shows the number of households in the US by their annual income in 2007, 2011 and 2015.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

The bar chart compares information regarding the number of American households by different levels of income per year in 3 years: 2007, 2011, and 2015, measured in millions of households.

Overall, it can be clearly observed that despite some inconsistencies, the number of households earning more than 100,000 USD experienced a significant/the most dramatic increase.

Starting with households earning less than 50,000 USD per year, the number of households that received below 25,000 USD per year began at 25 million households before reaching its peak at 29 million in 2011, finishing at 27 million in 2015. Likewise, the 25,000-49,999 USD per year group also experienced a similar trend, seeing that the number also peaked at 30 million in 2011 before slightly dropping to 28 million in 2015.

With regard to those that earned over 50,000 USD annually, even though there were inconsistencies in numbers, the most evident information was that the number of households earning more than 100,000 USD per year displayed the most dramatic growth from just below 30 million in 2007, peaking at 33 million in 2015, surpassing other groups of income.

WRITING TASK 1

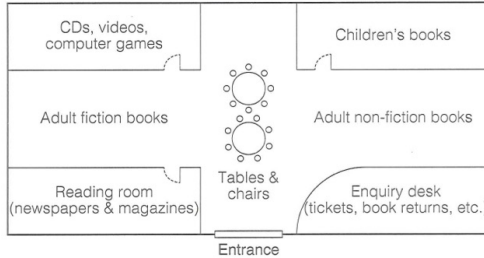

You should spend about 20 minutes on this task.

The diagram below shows the floor plan of a public library 20 years ago and how it looks now.

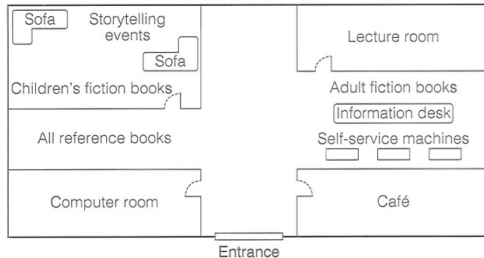

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Central Library 20 years ago

Central Library today

The given maps compare the transformation of Central Library 20 years ago with its current state.

Overall, various alterations can be noticed, including the removal of tables and chairs in the corridor and the enquiry desk located on the southeastern part, and the relocation of a number of sections. Interestingly, self-service machines have been introduced to replace the enquiry desk.

Starting with book sections, there has been a relocation of different book sections. For example, the room for CDs, videos, and computer games has been relocated to the southwestern corner of the map and transformed into a computer room, whereas the former location has been turned into a room for storytelling events and children's fiction books.

With regard to library facilities, the enquiry desk where visitors used to purchase tickets, return their books has been dismantled and substituted by a cafe. Nevertheless, to compensate for the absence of this facility, self-service machines have been constructed in front of the new cafe along with an information desk.

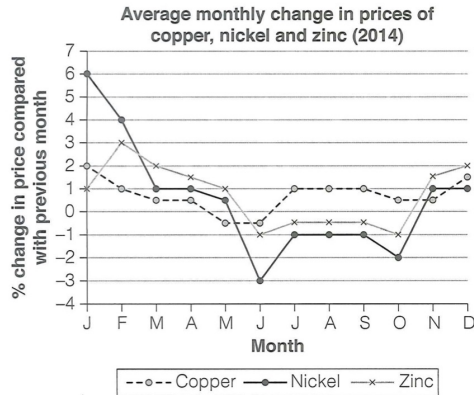

WRITING TASK 1

You should spend about 20 minutes on this task.

The graph below shows the average monthly change in the prices of three metals during 2014.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

The line graph compares information regarding the monthly change in the prices of three metals: copper, nickel, and zinc, on average over a period of one year in 2014. Interestingly, the change is measured in comparison to the previous month.

Overall, it can be clearly observed that the change in prices of Nickel experienced a dramatic downward trend, whereas that of other metals remained **relatively** stable, despite some fluctuations, throughout the given period.

Starting with January, at 6%, the change in the price of Nickel was the highest, followed by that of copper, and zinc, at 2% and 1%, respectively. However, in June, the change in the prices of all metals fell at different rates; however, that of Nickel experienced a most dramatic drop, reaching the lowest point at -3%.

From June onwards, the change in prices of all metals displayed a slight increase. For instance, the figure for copper rose mildly to 1.5%, while that of Nickel grew from -3% in June to 1% in December. Nevertheless, it is interesting to note that the change in price of Nickel was superseded by the rest of the metals by December.
