

Bar chart + pie chart (export)

Sample answer for band 7

TA : 7 - clear overview - บอกมากที่สุดของแต่ละ infographic

CC : 7 - good use of connective devices + referencing

LR : 7 - ใช้คำศัพท์ที่เหมาะสมกับโจทย์ (proportion)

GRA : 7 - complex sentences

The bar graph and pie chart compare the exports of pineapples in three different countries in 2009 and 2019, and the details of the cost of each pineapple, such as export costs and profit, in 2019.

Overall, it can be clearly observed that country A was the largest exporter of pineapples in 2019, whereas distribution and retail accounted for the majority of the cost of each pineapple in the same year.

Starting with the export of pineapples in 2009, at 5 million tonnes, country B was the largest exporter, followed by country A, and country C at 1 million and less than million, respectively. However, the export figure of country A surged dramatically to above 10 million tonnes in 2019, and become the most significant exporter, overtaking both country B and country C.

With regard to the detailed costs of a pineapple in 2019, although retail and distribution made up the highest proportion of the cost, only 4% was contributed by export costs. Finally, it is interesting to note that profit constituted 18% of the cost, while the production process was only responsible for 5% of the total cost of each pineapple in that year.
